

REFLECTION ON THIS ASSIGNMENT:

I find this assignment quite interesting. I got to know about many other new things. There are many other features of using html css and other functions in this assignment. I got to know how to make website on your own and I had used that vue router and v-if v-for v-model in order to ensuring the guidelines in the assignment and also I had used many buttons in my assignment in order to make it more effective. I am trying to ass more features to my assignment and I will be trying my best in future in order to be good in computers.
